Chart Accompanying: An Assessment of Cross-National Regulatory Burden Comparisons

Thomas D. Hopkins

Abstract

The Article compares several rankings systems for national regulatory compliance costs. It finds the ranking systems are limited to differentiating between those countries least burdened by regulation from those most burdened by regulation. It concludes the rankings could be an important tool for deciding which countries would be the most promising for regulatory burden reduction initiatives.

KEYWORDS: cross-national regulatory burden, administrative law, law and economics
antitrust economic social federal - controls federal - incentives state - controls state - incentives
