CRIMINOGENIC NEEDS NARRATIVE SUMMARY

ReEntry Substance Abuse

Reentry Substance Abuse Statement:

Mr. [REDACTED] reported no instances of committing any offenses while high/drunk. He did not report any prior drug charges/convictions. [REDACTED] did not report any prior history of drug problems and indicated no history of alcohol problems. Mr. [REDACTED] did not report any prior treatments for drug/alcohol abuse and did not indicate any history

Reentry Substance Abuse Treatment Implications:

For inmates scoring probable or highly probable it is advisable to assess the extent of previous treatments, current attitudes to treatment, and the responsivity of the inmate. A more specialized substance abuse assessment inventory (i.e. ASI, SASSI, etc.) may also be useful to determine the appropriate level of treatment upon release. Relapse prevention plans may be critical for such inmates upon release to the community.

Negative Social Cognitions

Negative Social Cognitions Scale Score: Unlikely

Mr. [REDACTED]'s scale score indicates that he is unlikely to have a negative or mistrusting view of social interactions or relationships.

Negative Social Cognitions Statement:

Mr. [REDACTED] indicated that it would not be difficult to learn to control his temper. He indicated that it would not be difficult to keep control of himself when other people make him mad. Mr. [REDACTED] reported that he mostly disagrees that he feels that other people get more breaks than him. He reported that he mostly disagrees that people have let him down or disappointed him. Mr. [REDACTED] reported that he mostly agrees that he likes to be in control in most situations. He reported that he mostly disagrees that he will argue to win with other people even over unimportant things. Mr. [REDACTED] reported that he mostly disagrees that when angry, he says unkind or hurtful things to people. He reported that he mostly disagrees that people are talking about him behind his back. Mr. [REDACTED] reported that he mostly agrees that he feels it is best to trust no one. He reported that he mostly disagrees that he prefers to be the one who is in charge in his relationships with other people. Mr. [REDACTED] reported that he mostly disagrees that he often loses his temper. He reported that he mostly disagrees that he gets angry at other people easily. Mr. [REDACTED] reported that he mostly disagrees that he feels that he has been mistreated by other people. He reported that he mostly disagrees that he feels that he has enemies that are out to hurt him in some way. Mr. [REDACTED] reported that he mostly agrees that when dealing with new people he quickly figures out whether they are strong or weak. He reported that he mostly disagrees that he often feels a lot of anger inside himself. Mr. [REDACTED] reported that he mostly disagrees he feels that life has given him a raw deal. He reported that he mostly disagrees that when people are being nice, he worries about what they really want. Mr. [REDACTED] reported that he mostly disagrees that when other people tell him what to do, he gets angry. He reported that he mostly disagrees that other people seem afraid of him. Mr. [REDACTED] reported that he mostly disagrees he often gets angry, but then he gets over it quickly.

Negative Social Cognitions Treatment Implications:

Scores of 7 and above may suggest a need for cognitive restructuring intervention as part of the case management plan. A high score on this scale may also indicate the need for close supervision of the case. For very high scoring cases cognitive interventions, coupled with substance abuse treatment (for example), may best begin in a controlled setting that is separated from all of the community/peer distractions. This might be sequenced prior to other community placement/probation program conditions.

Comments:

There are currently no comments on this narrative.

Low Self-Efficacy/Optimism

Low Self-Efficacy/Optimism Scale Score: Unlikely

Mr. [REDACTED]'s scale score suggests that he is unlikely to have low self-efficacy in his ability to deal with the various challenges of reentering the community.

Low Self-Efficacy/Optimism Statement:

Mr. [REDACTED] indicated that it would not be difficult to manage his money. He indicated that it would not be difficult to find people that he can trust. Mr. [REDACTED] indicated that it would not be difficult to find friends who will be a good influence on him. He indicated that it would not be difficult to avoid risky situations. Mr. [REDACTED] indicated that it would not be difficult to learn better skills to get a job. He indicated that it would not be difficult to support himself financially without using illegal ways to get money. Mr. [REDACTED] indicated that it would not be difficult to get along with people. He indicated that it would not be difficult to avoid spending too much time with people that could get him into trouble. Mr. [REDACTED] indicated that it would not be difficult to avoid risky sexual behavior. He indicated that it would not be difficult to avoid slipping back into illegal activities. Mr. [REDACTED] indicated that it would not be difficult to deal with loneliness. He indicated that it would not be difficult to avoid places or situations that may get him into trouble. Mr. [REDACTED] indicated that it would not be difficult to learn to be careful about choices he makes. He indicated that it would not be difficult to find people to do things with. Mr. [REDACTED] indicated that it would not be difficult to learn to avoid saying things to people that he later regrets.

Low Self-Efficacy/Optimism Treatment Implications:

Persons who lack such optimism or self-efficacy appear less likely to be able to cope successfully with various challenges of re-entry. Treatment implications would focus primarily upon building skills, confidence and optimism on the part of the re-entry client. Thus, skill-building as well as cognitive interventions would be implied.

Comments:

There are currently no comments on this narrative.

Low Family Support

Low Family Support Scale Score: Unlikely

Mr. [REDACTED]'s Family Support Scale score suggests that he has supportive family. Mr. [REDACTED] should be encouraged to draw on this strength to meet expectations and to stay out of trouble.

Low Family Support Statement:

Mr. [REDACTED] indicated that he intends to stay with family when released. He indicated that he is not estranged from family. Mr. [REDACTED] indicated that family members did visit him periodically during his incarceration. He indicated that he believes that other relatives are supportive. There appears to be evidence of family support.

Low Family Support Treatment Implications:

The case management strategy may be to see if family bonds can be strengthened or reestablished, if appropriate.

Comments:

There are currently no comments on this narrative.

ReEntry Financial

Mr. [REDACTED] suggested that money will not be a problem when he is released. He indicated that it will not be difficult to manage his money and indicated that it will not be difficult to have enough money to get by and reported that it will be somewhat difficult to find a job that pays more than minimum wage and that supporting himself financially without using illegal ways to get money will not be difficult.

Reentry Financial Treatment Implications:

Scores of probable or highly probable typically suggest a need to address the inmates financial plans prior to release. Developing a realistic budget and money management skills as well as employability skills and a job seeking plan may be addressed either prior to and after release.

Comments:

There are currently no comments on this narrative.

ReEntry Employment Expectations

Reentry Employment Expectations Statement:

Mr. [REDACTED] reported completing his high school diploma or GED. [REDACTED] appeared to be job ready (skilled, semi-skilled, or professionally skilled). Mr. [REDACTED] was able to specify other plans for employment

Mr. [REDACTED] reported feeling it will not be difficult to find a steady job. He reported that it will not be difficult to learn better skills to get a job. [REDACTED] did not think that it would be difficult to keep a job once he has found one and reported that it will be somewhat difficult to find a job that pays more than minimum wage.

Reentry Employment Expectations Treatment Implications:

Probable or highly probable scores suggest that vocational, employability and/or educational skills training may be helpful either prior to or upon release. This might include job seeking, job maintenance skill or other specific job skills.
