INTRODUCTION

Interlocking directorates, or management interlocks, are a form of structural links between companies occurring when firms directly or indirectly share a common board director or officer.\(^1\) A widespread practice in many economies around the world,\(^2\) interlocks, in and of themselves, are not necessarily harmful to competition, and indeed can produce procompetitive benefits.\(^3\) Nevertheless, serious risks can arise when interlocks involve competitors because of their potential to facilitate collusion or otherwise contribute to the establishment or maintenance of tacit or oligopolistic coordination.\(^4\) These competitive concerns raise particular enforcement challenges in small and emerging economies, which are often highly concentrated and tend to have weaker self-correcting tendencies than in larger economies.\(^5\) At the same time, scarcity of

2. Id. at 48 (“Interlocking directorates are a widespread phenomenon in many OECD countries and in many industry sectors.”). For further discussion regarding the frequency of interlocks in the United States, see Matt Krantz, Web of Board Members Ties Together Corporate America, USA TODAY, Nov. 24, 2002, http://usatoday30.usatoday.com/money/companies/management/2000-11-24-interlock_x.htm (finding a “startling amount of overlap” among the boards of the nation’s leading companies). According to USA Today, at the time of the article, “one-fifth of the 1,000 largest companies in the USA share at least one board member with another of the top 1,000.” Moreover, “[e]leven of the 15 largest companies, including Pfizer and Citigroup, have at least two board members who sit together on another board.” Id. Interlocks are common elsewhere as well. See, e.g., J. Thomas Rosch, Chairman, Fed. Trade Comm’n, Remarks before the University of Hong Kong, Terra Incognita: Vertical and Conglomerate Merger and Interlocking Directorate Law Enforcement in the United States 15–16 (Sept. 11, 2009), available at http://www.ftc.gov/speeches/rosch/090911roschspeechunivhongkong.pdf (noting that interlocking directorates are a common feature of Hong Kong businesses, similar in prevalence as in the United States, but perhaps even more tightly linked).

3. See Spencer Weber Waller, Corporate Governance and Competition Policy, 18 GEO. MASON L. REV. 833, 858 (2011); see also Benjamin M. Gerber, Enabling Interlock Benefits While Preventing Anticompetitive Harm: Toward an Optimal Definition of Competitors Under Section 8 of the Clayton Act, 24 YALE J. ON REG. 107, 108 (2007) (describing interlocks as “a practice which may occasion upon corporations benefits such as expertise, legitimacy, and coopetition of risk”).

enforcement resources makes policing these practices more difficult.6

The example of Chile illustrates the challenges facing these jurisdictions. Management interlocks appear to be such common occurrences in important sectors of the Chilean economy, including in the health care market,7 that the National Economic Prosecutor’s Office (Fiscalía Nacional Económica or “FNE”) recently undertook a study on the issue and how anticompetitive interlocks might be addressed under the Competition Act.8 Chile—like the vast majority of Organisation for Economic Co-Operation and Development (“OECD”) countries—does not explicitly address the practice in its antitrust laws and is thus left to deal with anticompetitive interlocks ex ante during merger reviews,9 or ex post under its general competition statute.10 In one recent example, the FNE confronted an interlock while reviewing the acquisition of a department store chain by one of Chile’s largest retail conglomerates. The FNE ultimately decided not to initiate a “consultation” before the Competition Tribunal (Tribunal de Defensa de la Libre Competencia or “TDLC”) after the acquired chain agreed to eliminate ties—one of which involved common directors—with another retail competitor.11 While this suggests that Chile’s competition authorities might be able to address

9. See OECD, Antitrust Issues, supra note 1, at 49 (“The majority of cases dealing with interlocking directorates are merger control cases, where the commonality of board members was considered to be a factor facilitating co-ordination between the interlocked firms.”); Rosch, supra note 2, at 21–22; Tommy Staahl Gabrielsen et al., Rethinking Minority Share Ownership and Interlocking Directorships: The Scope for Competition Law Intervention, 36 EUR. L. REV. 837, 855 (2011).
10. See OECD, Antitrust Issues, supra note 1, at 46; see also Gabrielsen et al., supra note 9, at 859.
potentially anticompetitive interlocks in certain instances, the
approach is inherently limited and (as will be discussed below)
not ideally suited to the particular constraints facing
competition enforcement there.12

In contrast to Chile, the antitrust laws in the United States
provide a means of tackling anticompetitive interlocks head on.
Section 8 of the Clayton Act prohibits a person from serving as
either a director or a board-elected or -appointed officer of two
or more corporations that are direct competitors with one
another.13 Importantly, section 8 has been interpreted as
establishing a per se prohibition, so that no anticompetitive
effect need be shown to establish a violation.14 The purpose of
this approach is “to nip in the bud incipient violations of the
antitrust laws by removing the opportunity or temptation to such
violations through interlocking directorates.”15 At the same
time, the statute is quite limited in scope—indeed, some argue
too limited—and provides various exceptions that assure that
the prohibition does not affect the vast majority of competitively
benign interlocks.16 Like any bright-line standard, “[i]t can be
both over- and under-inclusive in particular settings.”17
Nevertheless, as Professor Spencer Waller argues in a recent
article on corporate governance and competition law, section 8
represents “an appropriate compromise” that balances error
costs and process costs.18

While Indonesia, Japan, and Korea also address
interlocking directorates in their competition laws, the United
States is almost unique in adopting a per se ban that does not

12. In Chile, the problem of addressing potentially anticompetitive interlocks in
the context of merger reviews is further complicated by the fact that Chile, at least
theoretically, lacks a mandatory pre-merger notification regime.
of their business and location of operation, competitors, so that the elimination of
competition by agreement between them would constitute a violation of any of the
antitrust laws”).

require any analysis of the competitive effects of an interlock.\textsuperscript{19} Despite that fact, and although other jurisdictions have not followed the US model, section 8 of the Clayton Act nevertheless provides an extremely useful template for countries like Chile (and other small, emerging economies that already have developed competition institutions) to begin addressing anticompetitive interlocks. While legal transplants from one jurisdiction to another “can be unsuccessful and even harmful if they do not deal effectively with the special characteristics of the following jurisdiction,”\textsuperscript{20} in this case, it is precisely because the harmful effects of competitor interlocks may be especially acute in economies characterized by tight oligopolies that the adoption of a limited prophylactic measure is particularly advisable.

Moreover, because competition regimes in emerging jurisdictions may benefit from adopting simple and predictable standards over complex rules that seek to examine all of the complexities that might be associated with a particular practice,\textsuperscript{21} the approach of section 8 is also well-suited.

In arguing for the advantages of the US model, this Article proceeds as follows: Part I begins by briefly discussing the potential competitive effects of management interlocks. Part II then looks at the special characteristics of small, emerging economies like Chile’s and how, informed by decision theory, those particularities in those jurisdictions might be taken into account when developing rules or standards for addressing interlocks. Part III then looks at how Chile’s competition

\begin{itemize}
\item \textsuperscript{19} See Rosch, supra note 2, at 20–21. The competition laws in Indonesia, Japan, and Korea generally require that the market impact of specific interlocks be considered. \textit{Id.} In 2011, Italy enacted the “Rescue-Italy Law Decree,” which bans interlocks involving members of management boards, statutory boards of auditors, or executive officers between companies or corporate groups in banking, insurance, or finance. \textit{See} Valeria Falce, \textit{Interlocking Directorates: An Italian Antitrust Dilemma}, 9 J. COMPETITION L. & ECON. 457, 461–62 (2013).
\end{itemize}
authorities have addressed interlocks, while Part IV, in turn, contrasts that with the US experience under section 8 of the Clayton Act, including some recent enforcement efforts. As will become apparent in this discussion, the US model not only provides an easily administrable approach for dealing with interlocks between competitors, it also provides the needed flexibility to address competitive concerns that enforcers might not be able to remedy effectively in the absence of the statute. Finally, Part V considers the relative costs and benefits of the US approach towards management interlocks, and whether more finely-tuned alternatives might be preferable, and concludes that the US model fulfills what a decision-theoretic framework would recommend as an optimal approach for an economy like Chile’s.

The precise reach of any per se prohibition—whether implemented through a statutory amendment or by means of judicial rulings—would need to take into account any increased risks from the practice in a particular context, and some of the recognized weaknesses of section 8 surely could be improved upon. Moreover, to the extent an absolute ban does not reach particular instances that in fact turn out to be harmful (i.e., false negatives), those might still be addressed as they are currently, during merger review or under the general provisions of the competition laws. Nevertheless, the fundamental point remains: an absolute ban on those interlocks most likely to be anticompetitive (i.e., those involving direct competitors) is an optimal solution for small and emerging economies.

I. THE POTENTIAL COMPETITIVE RISKS AND BENEFITS OF MANAGEMENT INTERLOCKS

Minority shareholdings and interlocking directorates are mechanisms through which structural links may be established between competitors. As noted above, management interlocks involve situations in which one or more persons have executive responsibilities in two or more companies, and sometimes involve companies that are in horizontal or vertical business relationships. Interlocks are often accompanied by other
structural relationships between firms, including minority shareholdings, which raise their own competitive issues.\textsuperscript{23}

An interlock involving competitors may be either “direct” or “indirect.”\textsuperscript{24} The former is the most straightforward situation, and occurs when the same individual has executive responsibilities in two separate competing firms (as illustrated in Figure 1).

\textbf{FIGURE 1: Direct Interlock}

\begin{figure}[h]
\centering
\includegraphics[width=0.5\textwidth]{direct_interlock.png}
\caption{Direct Interlock}
\end{figure}

In contrast, an indirect interlock can take various forms. For instance, in an arrangement sometimes referred to as “deputization,” different individuals who represent a single person or corporation serve on the competitors’ boards (as illustrated in Figure 2). When the individuals, acting in a principal-agent relationship, for instance, represent the same interests on the separate boards, a situation materially the same as a direct horizontal interlock between the competitors can result.

\textbf{FIGURE 2: Indirect Interlock (“Deputization”)}

\begin{figure}[h]
\centering
\includegraphics[width=0.5\textwidth]{indirect_interlock.png}
\caption{Indirect Interlock (“Deputization”)}
\end{figure}

\textsuperscript{24} See OECD, Antitrust Issues, supra note 1, at 48.
A second variation of an indirect interlock involves a person serving as an officer or director of two corporations that do not engage in competition themselves, but which have subsidiaries that compete with one another (as illustrated in Figure 3).

**Figure 3: Indirect Interlock (Parent-Subsidiary Variation 1)**

And a third configuration can involve an interlock in which one corporation competes with the subsidiary of another (as illustrated in Figure 4).

**Figure 4: Indirect Interlock (Parent-Subsidiary Variation 2)**

Louis Brandeis, before his appointment to the US Supreme Court, was an influential voice in the early debates surrounding interlocking directorates, and a critic of the practice. Nearly a century ago, Brandeis famously wrote:

> The practice of interlocking directorates is the root of many evils. It offends laws human and divine. Applied to rival corporations, it tends to the suppression of competition and to violation of the Sherman law. Applied to corporations
which deal with each other, it tends to disloyalty and to violation of the fundamental law that no man can serve two masters.25

Contrary to Brandeis’ assertion, though, the competitive impact of interlocks (particularly with respect to some of the forms described above) is not so clear cut, and a number of potential benefits from management interlocks have been identified in the economics literature. The most common justification relates to the ability of firms to obtain the services of knowledgeable and experienced directors.26 Within a particular industry, the number of qualified candidates may be small, and engaging in an interlock may be necessary to allow firms to tap into the limited talent pool.27 In addition, firms may use management interlocks to co-opt sources of supply dependency, thereby assuring themselves access to resources necessary for their business operations.28 Moreover, interlocks may lend the legitimacy and prestige necessary for a firm to obtain financial resources.29 As one commentator has suggested:

Interlocks in some sense provide the best of both worlds with respect to inside and outside directors: An interlocked director has the ability to perform the monitoring function of an outside director, while—like an inside director—providing a high level of expertise (albeit not the firm-specific expertise that an internal manager can provide).30

Apart from potential corporate governance benefits, however, direct and indirect interlocks can bring with them certain risks,31 especially when the interlocks involve

28. Id. at 114.
29. Id. at 114–15.
30. Id. at 115 (citations omitted).
31. In addition to the potential competitive risks, a number of principal-agent issues have also been associated with management interlocks. See, e.g., Gerber, supra note 3, at 112 (“If managers are acting in their own self-interest rather than in the interest of the corporation’s shareholders, interlocks can be problematic.”); Waller, supra note 3, at 857–58 (noting that interlocks “can exacerbate the agency cost problems when a director’s decisions can benefit his interests in his other role with the competitor rather than serve the best interests of the shareholders at the company
competitors. As an initial matter, interlocks could be used to facilitate outright collusion. \(^{32}\) "[W]hen an individual simultaneously serves as an officer or director of two competing companies, he or she stumbles into a prime opportunity for collusion—for example, coordination of pricing, marketing, or production plans of the two companies." \(^{33}\) This is certainly not to suggest that interlocks involving "competitors" invariably will lead to collusive behavior, and indeed there is debate in the economics literature as to whether such interlocks result in meaningfully higher levels of collusion. \(^{34}\) Nevertheless, collusive conduct is often difficult and costly to detect, and when it does occur, can impose significant social costs. \(^{35}\) Even the possibility that interlocks could result in collusion, therefore, should be taken very seriously.

where he serves as a director"). These risks are generally beyond the scope of this Article.

32. See Christopher R. Leslie, \emph{Trust, Distrust, and Antitrust}, 82 TEX. L. REV. 515, 583–84 (2004) (discussing the historical use of interlocking directorates); see also Waller, supra note 3, at 858.

33. Gale T. Miller, \emph{Interlocking Directorates and the Antitrust Laws}, 26 COLO. LAW. 53, 53 (1997). Gabrielsen et al. suggest that even information exchanges, in the context of management interlocks, can have beneficial effects when, for instance, more information regarding demand shocks permits firms to better anticipate periods of low and high demand. Gabrielsen et al., supra note 9, at 843. Whether this should be credited as a "pro-competitive" justification, however, is questionable. In any event, these same commentators have noted that "more detailed information in some instances can enable the firms to better adapt their behaviour towards one another so that they will end up by competing less fiercely even in a setting without collusion." \(^{32}\) Gabrielsen et al. conclude, based on the existing literature, that "the net effect for consumers and society depends on the nature of competition (Cournot versus Bertrand), and on the type of information that is exchanged." \(^{32}\) Id.

34. See Gerber, supra note 3, at 117; see also Mark S. Mizruchi, \emph{What Do Interlocks Do? An Analysis, Critique, and Assessment of Research on Interlocking Directorates}, 22 ANN. REV. SOC. 271, 273 (1996); Edward J. Zajac, \emph{Interlocking Directorates as an Interorganizational Strategy: A Test of Critical Assumptions}, 31 ACAD. MGMT. J. 428, 436 (1988) ("Comparing the incidence of interlocks in allegedly collusive industries with that in a control group of firms" and concluding "that the incidence of interlocking among competitively interdependent firms is no greater than that predictable by chance."); Donald Palmer, \emph{Broken Ties: Interlocking Directorates and Intercorporate Coordination}, 28 ADMIN. SCI. Q. 40, 40 (1983) (discussing "the relative likelihood that different types of interlock ties facilitate relationships of formal coordination").

35. See John M. Connor & Robert H. Lande, \emph{Cartels as Rational Business Strategy: Crime Pays}, 34 CARDOZO L. REV. 427, 465 (2012) (adopting, as to the cost-benefit analysis of cartel penalties, a "relatively high 25% to 30% probability that cartels will be detected"—a probability Connor and Lande characterize as "conservative").
Apart from outright collusion, management interlocks may facilitate tacit collusion or other means of oligopolistic coordination through anticompetitive exchanges of sensitive information regarding sales and prices, product design, and firm strategy. These exchanges may make it easier for economic actors to reach common understandings regarding future behavior, and also help firms more readily detect deviations by others, thus lessening any incentive to deviate. Like outright collusion, tacit coordination can be difficult to detect, and even when it is discovered, proscribing the conduct can present its own challenges depending on the particular legal rules that apply. Other risks identified with horizontal interlocks include foreclosure of rivals, while perceived risks of vertical interlocks include preferential treatment of suppliers or customers through reciprocal or exclusive dealing, tying arrangements, and vertical integration.

II. CHARACTERISTICS OF SMALL ECONOMIES AND IMPLICATIONS FOR DESIGNING RULES OR STANDARDS TO ADDRESS ANTICOMPETITIVE INTERLOCKS

When considering the appropriate standard or rule to adopt with respect to interlocking directorates, it is important to take into account the potential harms and benefits described above. Whatever approach is adopted ideally would proscribe those interlocks that are harmful, while permitting those that are beneficial (or at least competitively benign). In other words, the standard would minimize error costs associated with false

36. See Waller, supra note 3, at 858; see also Gabrielsen et al., supra note 9, at 843; OECD, Antitrust Issues, supra note 1, at 49.
37. Gabrielsen et al., supra note 9, at 843.
38. Id. Gabrielsen et al. conclude, however, that these information exchanges may have an ambiguous effect on the stability of any coordination:
If you have more detailed information on the rival’s most valuable customers and products (the highest price-cost margin), your deviation can be targeted towards those segments and thereby become more profitable. In that respect, it destabilises co-ordination. At the same time, such information will make it possible for the firms to directly target certain customers group, which typically leads to tougher competition after any deviation. According to this effect, information exchange may lead to a more stable co-ordinated outcome.

Id.

39. OECD, Antitrust Issues, supra note 1, at 49.
negatives (i.e., failure to condemn anticompetitive conduct) as well as false positives (i.e., condemnations of competitive conduct). Increased precision, though, which tends to require more complicated market analyses, brings with it higher process costs. A full “rule of reason” analysis of management interlocks (balancing the anticompetitive harms of the practice in particular cases with any precompetitive benefits) therefore may have low error costs, in that it would tend to accurately identify and condemn only anticompetitive instances, but would bring with it high process costs. A bright-line per se rule, in contrast, would have low process costs but may have higher error costs.

Decision theory provides a useful framework for determining optimal legal rules or standards in a particular context. As “a process for making factual determinations and decisions when information is costly and therefore imperfect,” decision theory helps to determine, among other things, how much information, and what kinds, should be gathered and considered in arriving at a decision in a manner that accounts for both error costs and process costs. Following this approach, the pertinent questions to be considered when designing a rule or standard to address a particular category of conduct are: (1) how frequently pro-competitive (versus anti-competitive) uses of that conduct are encountered; (2) what is the magnitude of any benefit (versus harms) from that conduct; and (3) whether, given unavoidable error costs, an alternative rule would, on

42. See id. at 44 (“Every decision maker faced with imperfect information must resolve three related questions. First, assuming that a decision must be made with imperfect information, what is the optimal decision? Second, how much information should the decision maker gather and consider in making a decision? Third, if information is to be gathered, exactly which information should be considered and in what order?”).

43. As US Supreme Court Justice Breyer noted, economic theory suggests that even horizontal price-fixing could be more beneficial than “unfettered competition”
balance, “generally improve consumer welfare and administration of the [competition] laws.”44 In short, the designer must balance error and process costs.

The insights from decision theory also lead to the important conclusion that it is not enough simply to assume that an approach that works in one country will necessarily function in another. As Professor Michal S. Gal, a leading scholar on competition law in small economies, has cautioned: “the special characteristics of some economies may change the optimal rules because they affect the relative size of process and/or error costs.”45 For instance, Chile’s economy is characterized by tight oligopolies and by high barriers to entry in important sectors.46 Moreover, in smaller economies, the “invisible hand” is less likely to lead to market self-correction than in larger ones,47 and the business elite is more tightly knit and less willing to enter

PSKS, Inc., 551 U.S. 877 (Feb. 26, 2007) (No. 06-480); see Richard M. Brunell, Overruling Dr. Miles: The Supreme Trade Commission in Action, 52 ANTITRUST BULL. 475, 495 (2007); Marina Lao, Leegin and Resale Price Maintenance—A Model for Emulation or for Caution for the World?, 39 INT’L REV. INTELL. PROP. & COMPETITION L. 253, 254 (2008) (modern decision theory “requires focus . . . on the frequency of [any procompetitive] benefits and [anticompetitive] harms, error costs, and whether an alternative rule would better serve consumer welfare and the administration of the antitrust law”); see also Christiansen & Kerber, supra note 40, at 238 (applying an “error cost approach,” it is “not sufficient to show that there are cases in which resale price maintenance can lead to positive welfare effects.”).

45. Gal, supra note 20, at 68.

46. PATRICK REY, VERTICAL RESTRAINTS—AN ECONOMIC PERSPECTIVE 47 (2012), available at http://www.fne.gob.cl/wp-content/uploads/2012/10/Vertical-restraints.pdf (noting that the Chilean economy, like many other small economies, is characterized by a relatively high degree of concentration, with some of the most important industries having just a few participants).

47. Michal S. Gal, Size Does Matter: The Effects of Market Size on Optimal Competition Policy, 74 S. CAL. L. REV. 1437, 1472 (2001) (“[T]he market’s self-correcting tendencies are more pronounced in large economies than in smaller ones. In large economies, such tendencies are believed to deal effectively with most nonnatural monopolies. This, however, cannot as easily be said of small economies. In small economies, market conditions are such that the self-correcting forces of the market have a far more limited effect . . . .”).
each other’s domains.\textsuperscript{48} In this context, the error costs
associated with not preventing anti-competitive interlocks (false
negatives) are likely to be appreciably higher than in larger
economies.\textsuperscript{49} At the same time, given the smaller pool of
available business talent, the error costs of not allowing benign
or beneficial interlocks may also be somewhat higher. Those
facts, if true, would need to be taken into account in
formulating a standard.

Additionally, particularities with respect to process costs
also need to be taken into consideration. In small jurisdictions
like Chile, scarcity of enforcement resources is a significant
issue, and will likely continue to be an issue even as Chile’s
wealth continues on its upward trajectory.\textsuperscript{50} Application of
complex rules that seek to map the intricacies of economic
theories may make sense in larger, developed jurisdictions
where, because of the expertise and sheer resources of the
enforcement institutions, error costs are often low. In a more
resource constrained environment, however, enforcement
agencies will suffer from a more limited ability to perform the
necessary analysis.\textsuperscript{51} It is not a given in these circumstances that
the increased process costs of pursuing a more complex rule will
reduce the error costs associated with a simpler rule. Moreover,
those resources expended in enforcing the more complex rule
(which may or may not reduce error costs) also translate into
lower levels of overall enforcement. Those trade-offs should also
be taken into account in formulating an approach.\textsuperscript{52}

Based on this discussion, a few observations are in order
regarding an appropriate standard for management interlocks
in the Chilean context in particular (and more broadly, for
other small and emerging economies).

First, management interlocks are not intrinsically
problematic; rather, only certain interlocks pose such problems.

\begin{enumerate}
\item \textit{Id.} at 1448.
\item Gabrielsen et al., supra note 9, at 837 ("Minority share ownership, interlocking
directorships and other links between competitors have been something of a headache
in competition law for decades. This is particularly so in oligopolistic markets, where
the anti-competitive effect of various forms of structural links may be particularly
visible."").
\item Gal, supra note 6, at 421.
\item \textit{Id.} at 435.
\item See \textit{id.} at 437.
\end{enumerate}
Therefore, the standard cannot be too restrictive such that it unduly restricts those instances in which interlocks would be beneficial or otherwise competitively benign.

Second, the standard must nevertheless recognize that a certain subset of interlocks—those that either directly or indirectly involve competitors—have a significant potential for causing serious harm, and therefore are worthy of some kind of enforcement activity.

Third, given the nature of Chile’s economy, it would be preferable to err on the side of caution with respect to competitively suspect interlocks. The error costs of false negatives, which could result in cartelization or the softening of competition in oligopolistic markets, are potentially enormous. On the other hand, the costs of false positives (foregone benefits described in the prior section) are small in comparison. Indeed, the asymmetry seems so large that even if only some fraction of competitor interlocks results in actual harm, the balance would still favor a bias towards preventing false negatives.

Fourth, given relatively low error costs of false positives on the margins, the process costs of engaging in additional inquiry, through a rule of reason, to eliminate those instances would have to be very low to be worthwhile.

Fifth, whatever net benefits might be obtainable by engaging in a refined analysis of suspect interlocks must be weighed against the impact on overall enforcement efforts by an agency with limited resources.53

As will be described in the following parts, section 8 of the Clayton Act—which adopts a relatively bright-line rule that is also limited in reach—provides a reasonable model for satisfying these considerations.

---

53. The most recent annual budget for the FNE was around US$8.6 million, for a country with a population of around 16.6 million. By contrast, the budget for Canada’s Competition Bureau, for a country just over twice the size, with 35.2 million inhabitants, was around US$41.9 million. See Rating Enforcement 2013, GLOBAL COMPETITION REV., available at http://globalcompetitionreview.com/surveys/survey/828/rating-enforcement-2013/.
III. TREATMENT OF INTERLOCKS BY CHILE’S COMPETITION AUTHORITIES

As noted above, the Chilean competition authorities have addressed situations in which interlocks (and other structural links, such as minority shareholdings) have raised competitive concerns. The mechanism used in these instances is similar to that most commonly employed in the European Union and other jurisdictions that do not have specific provisions in their competition laws dealing with interlocks. Often, this occurs during the merger review process—a fact that complicates the situation in Chile even further given that the country does not have a mandatory pre-merger notification system.

Chile’s Competition Act establishes a broad prohibition against individual or collective acts or agreements “that impede, restrict or hinder competition, or that tend to produce such effects.” This general statement is then followed by descriptions of typical behaviors that can harm competition, including express or tacit agreements among competitors that confer market power, abuses of dominance by a single actor or group of actors, and predatory practices or unfair competition with the objective of obtaining, maintaining, or increasing a dominant position. The important point, however, is that this list is non-exhaustive, and therefore the prohibition set forth in

---

54. FNE, Minority Shareholdings, supra note 8, at 45. The first cases dealing with structural links between competitors were considered by the Comisiones Resolutivas (predecessors to TDLC), although these generally dealt with minority ownership interests, not management interlocks. Id.

55. Decree No. 211, art. 3 of Dec. 22, 1973 (Chile), amended by Decree No. 511 of Oct. 27, 1980 (Chile), Law No. 19,610 of May 19, 1999 (Chile), & Law No. 19,806 of May 31, 2002 (Chile). The first paragraph of Article 3 provides in full:

Any person entering into or executing, individually or collectively, any action, act or agreement that impedes, restricts or hinders competition, or that will tend to have such effects, will be sanctioned with the measures set forth in Article 26 of the present law, without prejudice to preventative, corrective or prohibitive measures that, with respect to said acts, actions or agreements, may be applied in each case.

57. Id. art. 3(b).

58. Id. art. 3(c).

59. The second paragraph of Article 3 provides that “[a]mong others, the following will be considered to be acts, actions or agreements that impede, restrict or hinder
Article 3 allows for the Competition Act to reach all types of conduct, whether individual or collective, that not only harms competition but that also might tend to do so. Thus, to the extent that management interlocks pose risks to competition that are not counterbalanced by significant efficiencies, they should be subject to oversight by Chile’s competition enforcement institutions, notwithstanding the lack of any specific mention of the practice in the Competition Act itself.\(^{60}\)

Prior to the establishment of the TDLC in 2004, the only instance in which the predecessor competition commissions directly addressed the potential effects of interlocks arose in the context of a complaint by Celulosa Arauco y Constitución S.A. (Arauco) against Carter Holt Harvey, two competitors in Chile’s important forestry products industry.\(^{61}\) Arauco complained that its main competitor sought to place one of its representatives on the Arauco board in order to gain access to confidential business information, including strategic plans.\(^{62}\) Notwithstanding the apparent competitive risks, the Commission dismissed the complaint because it concluded that Arauco—given a complex ownership structure—was actually a subsidiary of Carter Holt as a result of a prior acquisition by the latter of a fifty percent interest in an investment company that owned Arauco.\(^{63}\) The Commission concluded that the right of the company to place a representative on the Arauco board simply flowed from its capacity as a parent company.\(^{64}\) The earlier Carter Holt transaction was not itself questioned, highlighting the particular risks that can arise with respect to addressing interlocks when a jurisdiction, like Chile, does not have a mandatory pre-merger notification system in place.

The TDLC itself first imposed conditions implicating management interlocks in the context of authorizing a merger

between VTR and its primary competitor in Chile’s cable television industry, Metropolis Intercom. In approving the acquisition, the TDLC prohibited the merged company from “engag[ing] directly or indirectly, or through related persons . . . in the ownership of companies operators via satellite or microwave in Chile.”\textsuperscript{65} The TDLC resolution also precluded it from “participat[ing], directly or indirectly” in certain dominant companies in the fixed telephony market.\textsuperscript{66} These conditions required VTR parent Liberty to divest its ten percent interest in Sky Multi-Country Partners, parent of satellite television provider Sky Chile. Moreover, when considered together, the regulations eliminated the possibility of the merged company engaging in any of the most common forms of direct and indirect interlocks in the industry.\textsuperscript{67}

The FNE also has dealt with potentially anticompetitive interlocks in at least two investigations. The first arose in the context of a merger involving the acquisition by Cencosud S.A.—owner of one of Chile’s largest department store chains—of an eighty-six percent ownership interest in Johnson’s, a competing department store. The remaining fourteen percent remained in the hands of a group that held shares in Ripley

\textsuperscript{65} Tribunal de Defensa de la Libre Competencia [T.D.L.C.] [Competition Tribunal] 25 octubre 2004, Liberty Comunicaciones de Chile Uno Ltda. y Cristalchile Comunicaciones S.A., (also known as “Fusión entre VTR y Metrópolis Intercom”) Resolución 1/2004 p.50 (Chile).

\textsuperscript{66} Id.

\textsuperscript{67} FNE, Minority Shareholdings, supra note 8, at 82. The only other case in which the Competition Tribunal required the sale of a minority stake in a competitor as a condition of approving a merger involved supermarket chain SMU. In its resolution, the TDLC questioned SMU’s forty percent interest in another competitor, Supermarkets Montserrat, which was not part of the transaction. Tribunal de Defensa de la Libre Competencia [T.D.L.C.][Competition Tribunal] 12 diciembre 2012, Consulta de SMU sobre los efectos en la libre competencia de la fusión de las sociedades SMU S.A. y Supermercados del Sur S.A., Resolución 43/2012 pp. 41, 115 (Chile). Notwithstanding SMU’s lack of control over Monserrat, the TDLC recognized the competitive risks that can arise in the context of minority shareholdings and ordered the divestment of its interest as a condition of approving the transaction. Id. The same competitive questions regarding structural links between competitors can be seen in the various questions resolved by the TDLC regarding a regulation previously imposed by the predecessor Comisión Preventativa Central in the port sector. See Comisión Preventativa Central [C.P.C.][Central Preventative Commission], 21 agosto 1998, “Solicitud de las Empresas Portuarias sobre aplicación de los Arts. 14 y 23 de la Ley No. 19.542.” Rol de la causa: 102-98, Dictamen 1045, p.13–14 (Chile) (establishing various limitations on vertical and horizontal links between port operators).
Corp. S.A., another major Chilean department store chain. The result was not a direct interlock but rather an indirect one. While Johnson’s limited position in the market led the FNE to rule out unilateral risks to competition from the transaction, there was a concern that the connection with Ripley created risks of coordinated conduct. As the FNE noted:

From the point of view of competition, the connections that would exist between two companies, either through ownership or administrative links with each other, may be the subject of condemnation primarily because of the possibility of relevant and sensitive information flowing between them, facilitating, principally, the possibility of coordination between two economically independent companies. Furthermore, these relationships may reduce the competitive pressure between the two entities with ownership or management intertwined.68

In order to address the FNE’s concerns and to decrease the chances of coordinated action between Ripley and Cencosud, the two companies established a series of measures, which included a commitment by the minority shareholders in Johnson’s not to participate in the management and administration of Johnson’s or any other company in the Cencosud group, as long as they maintained their holdings in Ripley.69

A second instance raising concerns about anticompetitive interlocks involved the wood pulp market and arose in the course of an investigation of an alleged market allocation agreement between competitors in that market.70 During the investigation, the FNE became aware of the existence of a minority interest (11.03%) by the Matte Group in Copec S.A., an investment that allowed Bernardo Matte Larrain to be named to the company’s board. This resulted in structural and personal links between CMPC Celulose (on whose board Matte also served) and Copec S.A., the parent company (with a 99.9% interest) of Arauco y Constitución S.A., the only national

69. Id.
70. See Informe de Archivo de la Investigación, 27 noviembre 2012, Rol-1533-09.
competitor of CMPC Celulose in the relevant market. \(^{71}\) Despite this link, the agency did not pursue the investigation further because it was unable to establish the existence of a market allocation agreement. \(^{72}\) While the presence of common directors and ownership links between firms might have been considered as a “plus-factor,” the FNE found that these structures were insufficient by themselves to establish the existence of such an agreement between competitors. \(^{73}\)

While the general nature of Chile’s Competition Act allows the country’s competition authorities to deal with interlocks in a variety of contexts, the available tools nevertheless appear to be inadequate to deal appropriately with the many types of structural links between competitors that may cause competitive risks. Even if Chilean law allows for potentially anticompetitive interlocks to be reviewed without a “change of control” (as in some other jurisdictions), the absence of a mandatory notification system prior to the establishment of such links suggests that, in most instances, these interlocks will be detected only after they already have been constituted, as was the situation in some of the cases described above. Furthermore, when considered merely as “plus factors” in the context of an investigation into collusive conduct, the focus is no longer on the risks that interlocks can pose with respect to coordination, but instead shifts to whether the burden of proof for collusion has been satisfied in a particular instance. Neither approach appears to be well suited to addressing, in the context of a small economy with concentrated markets, anticompetitive interlocks with the goal of preventing anticompetitive harms from materializing in the first place.

\(^{71}\) Id.
\(^{72}\) Id.
\(^{73}\) Id. Following this case, and in the presence of this regulatory vacuum, the FNE’s Research Division was asked to undertake the preparation of a document identifying the possible measures that could be taken against management interlocks and other structural links between competitors that increase the risk of facilitating coordination or conscious parallelism but that may not themselves constitute an anticompetitive agreement. See FNE, Minority Shareholdings, supra note 8, at 89.
IV. CLAYTON ACT SECTION 8: AN APPROPRIATE COMPROMISE BETWEEN ACCURACY AND ADMINISTRABILITY

The US approach to dealing with potentially problematic management interlocks dates back to 1914 with the enactment of section 8 of the Clayton Act. The statute provides in relevant part:

> No person shall, at the same time, serve as a director or officer in any two corporations (other than banks, banking associations, and trust companies) that are . . . by virtue of their business and location of operation, competitors, so that the elimination of competition by agreement between them would constitute a violation of any of the antitrust laws . . . if each of the corporations has capital, surplus, and undivided profits aggregating more than $10,000,000 as adjusted pursuant to paragraph (5) of this subsection [currently US$23,883,000].

---

74. See Rosch, supra note 2, at 17 (noting that concerns about “[i]nterlocking directorates became such a hot-button political issue in the 1912 [presidential] election that all three political party platforms called for legislation to address the subject”).

75. The Clayton Act defines “person” to include “corporations”:

> The word “person” or “persons” wherever used in this Act shall be deemed to include corporations and associations existing under or authorized by the laws of either the United States, the laws of any of the Territories, the laws of any State, or the laws of any foreign country.

15 U.S.C. § 12(a) (2012). Interlocks involving other types of business entities, such as partnerships, are not reached. See North Am. Soccer League v. NFL, 670 F.2d 1249, 1262 (2d Cir. 1982) (holding that Section 8 does not apply to sports leagues).

76. In addition, Section 8 also does not reach interlocking directorates between bank and nonbank corporations. See Bankamerica Corp. v. United States, 462 U.S. 122, 128 (1983).

77. Because liability arises for interlocks only when an agreement between the corporations involved “would constitute a violation of any of the antitrust laws,” section 8 does not apply to interlocks between parent corporations and their wholly owned subsidiaries. See, e.g., Burnup & Sims, Inc. v. Posner, 688 F. Supp. 1532, 1534 (S.D. Fla. 1988). Under Copperweld Corp. v. Independence Tube Corp., 467 U.S. 752, 771–74 (1984), a parent company and its wholly owned subsidiary are not considered separate entities, and thus are legally incapable of conspiring for purposes of section 1 of the Sherman Act. What is less clear is the applicability of section 8 to partially-owned subsidiaries. See ABA SECTION OF ANTITRUST LAW, ANTITRUST LAW DEVELOPMENTS 427 (6th ed. 2007) [hereinafter ABA, ANTITRUST LAW DEVELOPMENTS].

78. § 19(a).

Section 8 is limited in both ambition and reach. It proscribe interlocks, but not every interlock. It applies only to interlocks involving corporations that are horizontal competitors. While not necessarily encompassing the universe of potentially anticompetitive interlocks, the statute nevertheless draws a line that likely captures the most competitively suspect ones. Even with respect to direct competitor interlocks, however, section 8 exempts those that are most likely to present only a de minimis risk of anticompetitive harm given the size of the corporations involved. These exemptions were refined even further in 1990, when the US Congress enacted additional restrictions on the reach of section 8 regarding transactions unlikely to pose competitive harms.80

Section 8 has generated remarkably little jurisprudence during its nearly one hundred-year history.81 That is likely the result of the federal courts having adopted a per se construction of section 8, which allows a violation to be established with no proof of actual anticompetitive effects from the management interlock. Moreover, “pragmatic” court decisions involving other issues arising under the statute—including the definition of “competitors” and whether the statute reaches “indirect” interlocks—have further contributed to the ability of section 8 to reach various manifestations of anticompetitive interlocks.

80. S. REP. NO. 101-286, at 5–6 (1990), reprinted in 1990 U.S.C.C.A.N. 4100, 4103-04 (“The intent of the committee is to preclude from the prohibition against interlocking directors competitive overlaps which are too small to have competitive significance in the vast majority of situations.”); see H.R. REP. NO. 101-483, at 7 (1990). Prior to the 1990 amendments, the FTC majority, in In re Borg-Warner Corp., 101 F.T.C. 863, 932 (1983), modified, 102 F.T.C. 1164 (1983), rev’d on other grounds, 742 F.2d 108 (2d Cir. 1984), held that there was no de minimis defense to a section 8 violation. In a footnote, however, the majority suggested that the level of commerce affected might play a role in the agency’s exercise of prosecutorial discretion with respect to a particular interlock, or in determining the scope of any subsequent order. Courts were divided on the de minimis question prior to the 1990 amendments. See William C. MacLeod, Interlocks at the Federal Trade Commission: Room for Reason in a “Per Se” Statute?, 53 ANTITRUST L.J. 1077, 1080–81 (1984). Thus, currently, interlocks involving competitors are not prohibited when: (a) competitive sales of either corporation are less than an inflation adjusted figure of US$1 million, 15 U.S.C. § 19(a)(2)(A), (currently US$2,888,300 for 2013), Revised Jurisdictional Thresholds of the Clayton Act, 78 Fed. Reg. at 2675; (b) competitive sales of either corporation are less than two percent of that corporation’s total sales, 15 U.S.C. § 19(a)(2)(B); or (c) competitive sales of each corporation are less than four percent of the corporation’s total sales. 15 U.S.C. § 19(a)(2)(C) (2012).

81. Rosch, supra note 2, at 17.
Combined with the 1990 amendments, these appear to have struck a reasonable balance that generally tends to allow beneficial or benign interlocks, but does so in a manner that avoids making enforcement unreasonably costly.

A. The Per Se Approach to Finding Violations of Section 8

The per se approach dates back to a 1953 district court ruling in United States v. Sears, Roebuck & Co., 82 the “first judicial construction” of section 8 since its enactment in 1914. In Sears, the defendant argued that the ‘so that’ clause of section 8 required a showing that a hypothetical merger between the two firms would violate section 7 of the Clayton Act, 83 which prohibits mergers between firms only when “the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.” 84 The court, however, rejected the defendant’s argument and instead held that the statute applied when a possible agreement (for instance, on prices) between the interlocked parties would contravene “any of the provisions of any of the antitrust laws.” 85 In short, it concluded that a straightforward per se test—under which liability turned on whether or not the two firms were or had been competitors—was the proper one.

Administrability considerations were important factors in the court’s decision to adopt a per se rule in Sears. Examining the legislative history of section 8, it concluded that “[t]he legislation was essentially preventative,” and that the defendant’s position “would defeat the Congressional purpose ‘to arrest the creation of trusts, conspiracies and monopolies in their incipiency and before consummation.’” 86 According to the court:

---

83. Id. at 616.
85. Id. at 616–17, 620–21; see Robert Jay Preminger, Deputization and Parent-Subsidiary Interlocks Under Section 8 of the Clayton Act, 59 Wash. U. L. Rev. 943, 951 (1981) (“In so deciding, the district court established a rule, thereafter the standard in section 8 cases, that a per se violation of the statute occurs under these circumstances so that “it is manifestly difficult for a defendant to successfully rebut an alleged section 8 violation when the . . . remaining conditions are proven.”).
86. Sears, 111 F. Supp. at 616–17 (quoting S. REP. No. 698, at 11 (1914)).
This conclusion is compelled because of the futility of trying to decide whether a given hypothetical merger would violate the pertinent sections of the antitrust laws. Such a decision would involve a consideration of many factors . . . [which] can be applied only in an actual case and not in a hypothetical situation . . . . This difficulty suggests that the merger test would result in complete nullification of the law prohibiting interlocking directorates in all but the rawest situation.87

The per se rule, in contrast, “permits the prohibitory features of § 8 to be administered with the full scope which the legislators must have contemplated.”88

The US Court of Appeals for the Seventh Circuit, in Protectoseal Co. v. Barancik, similarly concluded that it did “not believe Congress intended the legality of an interlock to depend on the kind of complex evidence that may be required in a protracted case arising under § 7.”89 As in Sears, the defendant in Protectoseal argued that a violation of section 8 could not occur unless a merger of the two companies would be unlawful under section 7. In rejecting that position, the Seventh Circuit concluded that the relevant language of Section 8 “establishes rather simple objective criteria for judging the legality of the interlock,” and that “a market-wide analysis of competition [was] unnecessary” under the statute.90

In 1990, the US Congress debated whether the section 7 standard, which had been rejected by the courts, should be applied to interlocks under section 8.91 Concerns were raised...
that echoed those expressed by the courts in *Sears* and *Protectoseal*, including that:

Such a standard would require a complete competitive analysis, covering relevant market definition, entry barriers [sic], etc., before one could tell whether an interlock is permissible. This would introduce substantial uncertainty and require a great deal of effort on the part of the agencies to enforce a law.\(^{92}\)

The US Congress further recognized that these higher enforcement costs would mean that “the interlock prohibition would effectively be nullified in all but the most egregious situations.”\(^{93}\) Thus, the bright-line standard was retained as the most appropriate approach given the prophylactic nature of section 8, even as per se approaches were being jettisoned in other areas of US antitrust jurisprudence around this time.\(^{94}\)

In contrast to the United States, Japan has adopted the very standard that was rejected for section 8 by precluding interlocks only when “the effect of such an interlocking directorate may be substantially to restrain competition in any particular field of trade.”\(^{95}\) Unlike with the Clayton Act, the focus of the Japanese Antimonopoly Act is not on whether there is simply an interlock between competitors.\(^{96}\) Rather, the focus is entirely on the effects of the restraint. Korea and Indonesia also follow similar

---

93. Id. at 7 (observing that the “Merger Guidelines . . . often work to permit mergers of direct market rivals with up to a 35-40 percent marketshare”).
96. Article 13 reads in full:

Neither an officer nor an employee (meaning in this article a person other than officers engaged in the business of a company on a regular basis) of a company shall hold at the same time a position as an officer of another company where the effect of such an interlocking directorate may be substantially to restrain competition in any particular field of trade.

*Id.*
approaches, and in all three cases, the requirement that there be a showing that the interlock would have an actual effect on competition results in an enforcement burden not present with section 8.97

B. Identification of “Competitors” and Other Issues in Applying the US Standard

With the adoption of a per se approach in the United States, one of the core remaining questions under section 8 has been whether two corporations are “competitors” with one another within the meaning of the statute. In answering that question, some courts have applied the market definition analyses used under the Sherman and Clayton Acts more generally.98 Other courts, however, have not restricted themselves to using “quantitative market definition analysis typically applied in Clayton Act Section 7 merger cases,” but rather have employed a more flexible “qualitative analysis” as well.99 As with the rejection of an effects analysis, concerns with respect to administrability and the policy objectives of section 8 underlie these decisions as well.

The Ninth Circuit’s decision in TRW, Inc., v. Federal Trade Commission provides an example of this truncated approach to

97. See OECD, Antitrust Issues, supra note 1, at 130–40, 197–201.
98. ABA, ANTITRUST LAW DEVELOPMENTS, supra note 77, at 427–28; see Preminger, supra note 85, at 948–49 (“[A] policy has developed whereby the courts and the Federal Trade Commission (FTC) apply, by analogy, the ‘line of commerce’ and geographic market standard recognized by the Supreme Court in the section 7 merger context . . . . Although applied in a less than mechanical fashion, these standards provide structured criteria by which to test the degree of competition between interlocked entities.”). In American Bakeries Co. v. Gourmet Bakers, Inc., for instance, a federal district court stated that:

there are clear antitrust guidelines for determining whether corporations compete. For example, the “relevant market test” may be applied . . . . The presence of actual competitiveness . . . is determined by two tests:

(1) Can the two products (the defendant’s and the substitute) be said to compete because they are reasonably interchangeable with respect to the uses to which they can be put?

(2) Are the two products actually competitive because there is a high cross-elasticity of demand on the part of customers?

99. Gerber, supra note 3, at 108; see ABA ANTITRUST LAW DEVELOPMENTS, supra note 77, at 428.
identifying “competitors” for purposes of section 8. In TRW, the petitioner-defendants argued that whether they were “competitors” should be judged by the standards of cross-elasticity of demand and reasonable interchangeability of use of their products. The Court of Appeals, however, rejected the defendants’ position and concluded that the prophylactic purposes underlying section 8 “would not be well served” by such a requirement.

The Ninth Circuit gave two principal reasons for its conclusion. First, such an inquiry is not conceptually necessary given that section 8 only requires that “two alleged ‘competitors’ [be] involved and proof that the interlock has an actual anticompetitive effect is not required.” Second, the Ninth Circuit considered the defendants’ proposed standard to be “too restrictive.” For instance, “while the tests of cross-elasticity of demand and interchangeability of use may yield realistic results in well-established industries,” the court noted that they are much less useful in evolving markets still in their “infancy.” Thus, it concluded that in order to further the purpose of the statute, it was also appropriate to consider evidence concerning:

1. the extent to which the industry and its customers recognize the products as separate or competing;
2. the extent to which production techniques for the products are similar; and
3. the extent to which the products can be said to have distinctive customers.

The Ninth Circuit’s “qualitative” approach has the potential to increase uncertainty, and perhaps in some instances to raise enforcement costs. The Court of Appeals itself recognized that its approach “may render more difficult the process of screening potential directors for compliance with section 8.” On the other hand, even market definition analyses that do not engage in a full competitive analysis can be

\[100\] See, e.g., 647 F.2d 942 (9th Cir. 1981).
\[101\] Id. at 946.
\[102\] Id. at 947.
\[103\] Id. (citations omitted).
\[104\] Id.
\[105\] Id.
\[106\] Id.
\[107\] Id.
extremely costly, and by not requiring such an assessment, enforcement costs are reduced. This goes hand-in-hand with the approach described above eschewing an effects analysis. Moreover, this flexible approach may better facilitate section 8’s prophylactic purpose in important sectors of the new economy.

An additional complication with the US approach is whether section 8 reaches not only “direct” interlocks involving competitors, but the various “indirect” interlocks described above. The Department of Justice (“DOJ”) and Federal Trade Commission (“FTC”) both have taken the position that a violation of section 8 may occur when different individuals, representing a single person or corporation, serve on boards of competitors (as illustrated in FIGURE 2 above). This makes

108. See Gerber, supra note 3, at 131 (noting that “even absent a requirement of anticompetitive effect, the cost of quantitative market definition remains a valid concern”).

109. Preminger argues that “[w]hat scant legislative history exists supports the contention that Congress did not intend section 8 to extend to interlocks other than the more blatant, direct forms that come within the literal meaning of the statute.” Preminger, supra note 85, at 951. To the extent that is the case, that may have been a function of the fact that “[w]hen the Clayton Act was written the Congress had no experience with legislation about interlocking directorates. The provisions of the statute were apparently designed to cope with the problems that had become most conspicuous during the two previous decades.” FED. TRADE COMM’N, REPORT ON INTERLOCKING DIRECTORATES, H.R. DOC. NO. 81-652, at 13 (1951). The staff of the House Judiciary Committee’s Antitrust Subcommittee later came to a similar conclusion, noting that:

Divergences in coverage and in treatment [of the Clayton Act anti-interlock provisions] manifest the exploratory and experimental nature of the legislation. Congress apparently was reluctant to go beyond the specific management abuses that had been defined at the time and promulgate a consistent policy that would define and deal with the root of the problem.

STAFF OF THE ANTITRUST SUBCOMM. OF THE H. COMM. ON THE JUDICIARY, 89TH CONG., REP. ON INTERLOCKS IN CORPORATE MANAGEMENT 28 (1965). But see Reading Int’l v. Oaktree Capital Mgmt. LLC, 317 F. Supp. 2d 301, 330 (S.D.N.Y. 2003) (“Indeed, the paucity of explicit discussion of this question in the debates surrounding the bill’s passage indicates that it was not the particular form that interlocks might take, but rather their result, that was the primary concern of Congress in 1914.”).

110. See Brief for the United States as Amicus Curiae, Reading Int’l, Inc. v. Oaktree Capital Mgmt’ LLC, No. 03-CV-1895 (GEL) (THK) (Oct. 1, 2003), at *3, available at http://www.justice.gov/atr/cases/f201300/201321.pdf (“The United States has long taken the position that a corporation or other business entity may violate Section 8 of the Clayton Act if its deputies serve as directors or officers of competing corporations barred from sharing directors or officers under the statute.”); ABA, ANTITRUST LAW DEVELOPMENTS, supra note 77, at 428–29; see also Advisory Opinion Letter to United Auto Workers, 97 F.T.C. 933 (May 1, 1981) (stating that the FTC
sense since the same concerns regarding information exchange between competitors can arise regardless of whether the same individual serves in an executive capacity with two firms, or whether the interlock is accomplished with two or more people.\footnote{\textsuperscript{111}}

A federal district court reached a similar conclusion in \textit{Reading International v. Oaktree Capital Management LLC}, a case involving a private equity firm that had significant ownership interests in two competing movie theater chains.\footnote{\textsuperscript{112}} In \textit{Reading}, the equity firm’s president served on the board of one of the theater chains, while a principal of the firm was a board member of the other chain.\footnote{\textsuperscript{113}} On the defendant’s motion to dismiss, the district court rejected the argument that section 8 could only apply to an \textit{individual} serving simultaneously on two competitors’ boards. Rather, the court concluded that the plaintiffs could prevail by establishing that the directors’ service on the competitors’ boards was not in their individual capacities, but rather “as the deputies of [the private equity firm], acting as the puppets or instrumentalities of the corporation’s will, such that it can legitimately be said “that it is the [firm] as an entity . . . which ‘serve[s] as a director’ of both [movie theater chains].”\footnote{\textsuperscript{114}} According to the court:

\begin{quote}
To hold otherwise would be to allow corporations (and individuals) to evade antitrust liability simply by designating agents to serve their bidding on the boards of competing businesses. The purposes of the statute, “to avoid the opportunity for the coordination of commercially sensitive
\end{quote}
information by competitors,” would be ill-served by such a cramped reading.115

With respect to other configurations of indirect interlocks, including situations in which a person serves as an officer or director of two corporations that are not themselves competitors, but that involve subsidiaries (as illustrated in FIGURES 3 & 4 above), both the DOJ and the FTC have taken enforcement actions premised on such indirect interlocks.116 In Borg-Warner Corp., for instance, the FTC concluded that the relevant inquiry under section 8 in these circumstances is whether the parent company should be regarded as a “competitor” of the subsidiary’s competitors, and whether an interlocked director is so placed as to be able to exercise control or even to substantially influence decision-making at the director level so as to dampen competitive relationships between divided corporate interests.117

Federal courts, however, have split on this question. In United States v. Crocker National Corp, the Ninth Circuit concluded that when a parent “substantially controls the policies

115. Id. (emphasis added) (quoting Square D Co. v. Schneider, 760 F. Supp. 362, 366 (S.D.N.Y. 1991)). Other courts have also referred to the possibility that section 8 liability might arise in the case of an indirect lock consisting of different representatives from the same entity. In United States v. Cleveland Trust Co., the DOJ alleged that the defendant, through two different “agents,” had been a “member” of the boards of two direct competitors. 592 F. Supp. 699, 702 (N.D. Ohio 1974), aff’d 513 F.2d 633 (6th Cir. 1975). The district court, on a motion for summary judgment, did not reject the government’s theory as a matter of law (though it noted that the question was “entirely unsettled”), but declined to grant the motion because of significant factual questions that remained. Id. at 712. In Pocahontas Supreme Coal Co. v. Bethlehem Steel, the US Court of Appeals for the Fourth Circuit dismissed the plaintiff’s section 8 claim based on a representative theory, but did so because the record before the court included only “conclusory allegations” that deputization had occurred.” 828 F.2d 211, 217 (4th Cir. 1987). The appellate court did not reject the theory as a matter of law. For a discussion of how “deputization” and parent-subsidiary interlocks were “often used successfully to sidestep the express restrictions of [section 8],” thereby threatening the purpose of the statute, see Preminger, supra note 85, at 945.

117. Borg-Warner Corp., 101 F.T.C. 863, 932, modified, 102 F.T.C. 1164 (1983), rev’d on other grounds, 742 F.2d 108 (2d Cir. 1984). In Borg-Warner, the FTC challenged an interlock resulting from the acquisition of Borg-Warner stock by Bosch GmbH, a German corporation. Two directors sitting simultaneously on the boards of Bosch GmbH and Bosch U.S., the German company’s wholly-owned American subsidiary, assumed positions on Borg-Warner’s board. The theory espoused in the FTC complaint was that the arrangement constituted an illegal interlock insofar as Bosch U.S. competed directly with Borg-Warner. Id.
of its subsidiary,” the “business and location” of the parent includes that of the subsidiary as well. In contrast, the Second Circuit, in *Kennecott Copper Corp. v. Curtiss-Wright Corp.*, overturned the “general rule” adopted by the district court that section 8 prohibits interlocking directorates between parent companies with subsidiaries that are competitors, though that ruling may be limited by its facts and is not necessarily inconsistent with the pragmatic approach adopted by the Ninth Circuit.

In contrast to section 8, the Japanese Antimonopoly Act does not appear to concern itself whatsoever with whether “competitors” are involved in the interlock. The result is that Japan’s approach may be more expansive than the Clayton Act, which has been held to apply only to interlocking directorates between horizontal competitors, whereas the Japanese act conceivably could reach even vertical interlocks that affect competition. The Japanese approach, in theory, also relieves enforcers of the burden of establishing that the parties involved are competitors. It seems unlikely, however, that the overall enforcement burden under the Japanese approach, with a requirement of showing possible effects, would be less than in the United States, where “competitors” can be (at least in some courts) established using a “qualitative” approach.

119. 584 F.2d 1195, 1205 (2d Cir. 1978).
120. See supra notes 95–96 and accompanying text.
121. TRW, Inc., 93 F.T.C. 325, 379 (1979), aff’d in part, rev’d in part sub nom, TRW, Inc. v. FTC, 647 F.2d 942 (9th Cir. 1981).
122. While interlocks between suppliers and customers are not reached by section 8, in theory, these could raise competitive concerns. As the OECD has noted, these arrangements “traditionally have been criticized on the ground that they can lead to preferential treatment at the expense of other suppliers or customers by facilitating reciprocal or exclusive dealing, tying arrangements, and vertical integration.” See OECD, *Antitrust Issues*, supra note 1, at 49.
123. By its own terms, section 8 has some important limitations that prevent it from reaching certain competitor interlocks that nevertheless could raise concerns. For instance, the statute applies only to officers or directors, not employees or agents, even though interlocks involving the latter could also result in information exchanges or other anticompetitive harms. Furthermore, section 8 only applies to officers or directors of corporations, but not of other types of business entities, such as partnerships. See North Am. Soccer League v. NFL, 670 F.2d 1249, 1252 (2d Cir. 1982) (holding that Section 8 does not apply to sports leagues). Moreover, the statute probably does not reach interlocks in which individuals from competing corporations sit on a board of a
C. Recent Experiences Demonstrate the Benefits of the US Model

The relatively low-cost and on-balance predictable nature of the bright-line rule for interlocks in the United States translates into some real benefits with respect to enforcement, which are particularly important when considering emerging economies in which agency resources are (in relative terms) scarce. Section 8 can be enforced by the DOJ, the FTC, or by private parties, and in theory, remedies in private actions theoretically could include treble damages, although there do not appear to be any instances in which monetary awards have been given.\textsuperscript{124} Rather, when disputes arise, the typical remedy involves the resignation of a director from one of the two corporations,\textsuperscript{125} or sometimes the divestiture of a business line so the firms are no longer competitors, and, thus, no longer subject to the statute’s prohibitions.\textsuperscript{126}

non-competing company, or interlocks involving family members or close friends, even though, again, these forms could also lead to anticompetitive results. See Rosch, supra note 2, at 18. Nevertheless, even when section 8 does not apply, other legal prohibitions may exist regarding management interlocks. For instance, section 305 of the Federal Power Act, 16 U.S.C. § 825d(b) (2012), prohibits individuals—absent prior authorization from the Federal Energy Regulatory Commission—from being an officer or director of more than one public utility or from holding such a position with a public utility and a company that may underwrite or market public utility securities. Similar sector-specific restrictions have been enacted in other industries as well. See, e.g., Public Utility Holding Company Act of 1935 § 17(c), 15 U.S.C. § 79q(c) (repealed 2005) (regulating interlocks involving public utility holding companies); Investment Company Act of 1940 § 10(b)(2), (c), 15 U.S.C. § 80a-10(b)(2), (c) (regulating interlocks between registered investment companies and, respectively, underwriters and bank officers, directors or employees); Communications Act of 1934 § 212, 47 U.S.C. § 212 (regulating interlocks between \textit{communications} carriers). Some states have enacted similar prohibitions that apply even when firms do not meet the minimum monetary thresholds for Section 8. See, e.g., Alaska Stat. § 45.50.570 (2013); Wis. Stat. § 133.06 (2013). Further, the FTC has challenged interlocks that did not violate section 8 by means of section 5 of the FTC Act, 15 U.S.C. § 45, which prohibits “unfair methods of competition,” and can be used to reach conduct that is not necessarily proscribed by other antitrust statutes. See Rosch, supra note 2, at 19–20 (citing \textit{Kraftco Corp.}, 89 F.T.C. 46, \textit{remanded on other grounds sub nom.}, SCM Corp. v. FTC, 565 F.2d 807 (2d Cir. 1977), \textit{affirmed after remand}, 612 F.2d 707 (2d Cir. 1980), \textit{cert. denied}, 449 U.S. 821 (1980)).

\textsuperscript{124} See ABA, ANTITRUST LAW DEVELOPMENTS, supra note 77, at 430.

\textsuperscript{125} Under the statute, a person who becomes ineligible to serve as an officer or director of a competitor due to some intervening event has a one-year grace period from the time of that event in which they can continue in that position. See 15 U.S.C. § 19(b).

\textsuperscript{126} See Gerber, supra note 3, at 131.
The federal government rarely sues under section 8.\textsuperscript{127} In fact, the most recent contested case brought by the government, \textit{Borg-Warner}, was filed thirty-five years ago.\textsuperscript{128} While this may be due in part to section 8 enforcement having experienced “periods of benign neglect” over its history,\textsuperscript{129} in recent years both the DOJ and FTC have addressed management interlocks—with the FTC having pursued a particularly high-profile matter involving Google and Apple.\textsuperscript{130} Rather, the dearth of section 8 litigation is more likely attributable to government enforcement having become largely “administrative” in nature. As Judge Easterbrook recently described that process, “[w]hen the [DOJ] or the FTC concludes that directorships improperly overlap, it notifies the firm and gives it a chance to avoid litigation (or to convince the enforcers that the interlock is lawful).”\textsuperscript{131} While there may be disputes about the parties’ status

\begin{flushright}
127. See Robert F. Booth \textit{Trust v. Crowley}, 687 F.3d 314, 319 (7th Cir. 2012) (estimating the odds of a lawsuit by the DOJ or FTC for the challenged interlock at less than one percent); see also Preminger, \textit{supra} note 85, at 952 n.41 (noting that from 1914 to 1965 the DOJ had filed only ten cases alleging violations of section 8, while the FTC filed thirteen lawsuits in that time, with all but one resulting in dismissal upon voluntary dissolution of the interlock).

128. See \textit{Crowley}, 687 F.3d at 319.

129. See J. Randolph Wilson, \textit{Unlocking Interlocks: The On-Again Off-Again Saga of Section 8 of the Clayton Act}, 45 \textit{ANTITRUST L.J.} 317, 317 (1976) (describing DOJ and FTC enforcement of section 8 as having “been punctuated by a few bursts of mild activity and then followed by long periods of benign neglect”).

130. In this way, section 8 enforcement is entirely unlike the not-so-benign neglect of the Robinson-Patman Act, 15 U.S.C. § 13 (2012), which prohibits unfair price discrimination on the sale of goods to equally-situated distributors when the effect is to reduce competition. Government enforcement of the Robinson-Patman Act has been curtailed significantly since the 1960s, and the Antitrust Modernization Commission recommended in its April 2007 report that the statute be repealed. See \textit{ANTITRUST MODERNIZATION COMM’N, REPORT AND RECOMMENDATIONS 38} (April 2007) (“Congress should repeal the Robinson-Patman Act in its entirety.”).

131. \textit{Crowley}, 687 F.3d at 319. Indeed, this “administrative” approach appears to have been the norm for a far longer period, as one commentator describes the process in an article from 1950:

The Department of Justice’s extra-judicial procedure for wholesale enforcement of Section 8 is a novel antitrust enforcement technique. It has been customary to correct alleged violations by instituting lawsuits. But if enforcement by administrative persuasion accomplishes the objectives of the statute, that method would seem to be not only in the public interest but also in the interests of the persons whose directorships are questioned since it gives them an opportunity to resign without publicity and its attendant unpleasantness . . . . In Section 8 matters, the relief is simple and specific: resignation from all but one of the boards of the competing corporations.
as “competitors” or whether the statute applies to a particular “indirect” interlock, the legal analysis under section 8 (as described above) is otherwise generally quite straightforward—something that could not necessarily be said under an effects standard. Because of the per se standard followed by the courts, the likely outcome is more certain and predictable. Moreover, if a violation of section 8 has occurred, the investigated corporations usually can resolve the matter at relatively low cost, with the resignation of a board member or divestiture of a line of business. As a result, “[f]or more than 30 years, this process has enabled antitrust enforcers to resolve § 8 issues amicably—either avoiding litigation or entering consent decrees contemporaneous with a suit’s initiation.” This dynamic is illustrated by some examples of recent enforcement activity in the United States.

As noted above in the case of Chile and elsewhere, interlock issues sometimes arise in the merger context. Section 8 has been used in the United States to address those concerns when they arise in that situation. One recent example involves the December 2007 consent decree in United States v. CommScope. In that matter, CommScope, a manufacturer of wire and cable products, including drop cable and related hardware, acquired another company, Andrew, that had recently sold its own drop cable manufacturing business to a third company, Andes. Andrews, in turn, held a thirty percent equity stake in Andes at the time of the acquisition, and enjoyed other governance rights, including the right to designate various board members. Those rights became a source of concern for the

Victor H. Kramer, Interlocking Directorships and the Clayton Act After 35 Years, 59 Yale L.J. 1266, 1271 (1950); see Ephraim Jacobs, Interlocks, 29 Antitrust L.J. 204, 209 (1965) (describing “voluntary compliance” with Section 8). For a less sanguine view, see Preminger, supra note 85, at 952-53 (arguing that “[d]espite the efficiency of these summary enforcement techniques, their use detracts from the deterrence value of the statute” and that “[t]he paucity of reasoned decisions on the merits in section 8 cases gives the statute less coherence and predictability of interpretation than a sixty-seven year old law would normally warrant” (citations omitted)).

132. See supra Part IV; see also Waller, supra note 3, at 857 (describing the typical disputes as “boundary” issues).

133. See Waller, supra note 3, at 857.

134. Crowley, 687 F.3d at 319.

DOJ because, the agency concluded, CommScope and Andes were each other’s closest competitors for many customers. The rights would thus give CommScope “both the incentive and the ability to coordinate its activities with those of Andes, and/or to undermine Andes’ ability to compete on price and innovation.”\textsuperscript{136} To ameliorate those concerns, the DOJ required the parties—as a condition to its approval of the transaction—to renounce their governance rights, including CommScope’s right to appoint members of Andes’ board.\textsuperscript{137}

Even in jurisdictions that do not follow the US model, it may be possible to analyze the potential competitive effect of management interlocks during merger reviews. As noted above, Chile’s competition authorities have been able to address the practice in certain instances, even though the Competition Act does not specifically address interlocking directorates.\textsuperscript{138} In the European context, however, it has been noted that that law does not address the issue “in a coherent way,” and consequently “minority shareholdings, cross-shareholdings and interlocking directorships have been allowed to develop in a wide range of markets.”\textsuperscript{139} In Chile, which does not have a comprehensive merger regulation like the European Union, the regulatory gap for dealing with questionable interlocks during the merger review process can be expected to be even greater. From an enforcement perspective, relying on merger reviews for addressing potentially anticompetitive interlocks does not appear to be an optimal solution, producing too many false negatives.

Apart from interlocks that arise in connection with mergers, however, competitive concerns can also arise in situations that do not involve reviewable transactions, such as

\textsuperscript{136} Id. at 8.

\textsuperscript{137} Id. at 10. In the context of EU merger reviews, divestiture or reduction of minority ownership interests outside of the transaction under review have been offered and accepted by the Commission in various cases. See Gabrielsen et al., supra note 9, at 846. This demonstrates some flexibility in terms of the merger review process being able to address management interlocks that may not have arisen from the merger itself. However, as discussed below, there are other instances of management interlocks that could not be reached under this mechanism.

\textsuperscript{138} See supra Part III.

\textsuperscript{139} Gabrielsen et al., supra note 9, at 855. For a discussion of merger reviews in the European Union that also involved minority ownership links and management interlocks, see id. at 845–46.
when corporations expand into new markets and lines of business. The FTC's investigation regarding a management interlock between Apple and Google provides a good example of this. When the FTC began its inquiry in 2009, Apple and Google shared two directors: Eric Schmidt, who was CEO of Google, and Arthur Levinson, former CEO of Genentech. Dr. Schmidt became an Apple director in August 2006,\(^{140}\) at a time when Apple and Google were working to integrate various Google technologies, such as search and Google Maps, into Apple's iPhone, then under development. Following Apple's announcement of the iPhone in January 2007, however, Google unveiled its Android mobile device platform in November of that year and the two companies became major competitors in the smart phone market.\(^{141}\) Indeed, Apple's fortunes were increasingly seen as tied to mobile devices, and Google viewed the mobile arena as a strategic opportunity for expanding its advertising services. It was this competitive overlap that presumably became the source of the FTC's concerns,\(^{142}\) and ultimately led to Dr. Schmidt's resignation from Apple's board in August 2009,\(^{143}\) as well as Mr. Levinson's from Google's in October 2009.\(^{144}\)

\(^{141}\) In addition, Apple’s Safari web browser competed with Google’s Chrome, and Google Internet properties, such as YouTube, and Apple’s iTunes became rival distribution vehicles for music and videos. See Miguel Helft, Board Ties at Apple and Google Are Scrutinized, N.Y. TIMES, May 5, 2009, http://www.nytimes.com/2009/05/05/technology/companies/05apple.html.

\(^{142}\) Id.

\(^{143}\) Fed. Trade Comm’n, Statement of Bureau of Competition Director Richard Feinstein Regarding the Announcement that Google CEO Eric Schmidt Has Resigned from Apple’s Board (Aug. 3, 2009), http://www.ftc.gov/opa/2009/08/googlesmnt.shtm. Given the increased rivalry between Apple and Google in smart phones, it is reasonable to ask whether Dr. Schmidt would have been able to continue in his role on Apple’s board even without an FTC investigation. See Josh Quittner, Why Google’s Schmidt Resigned from Apple’s Board, TIME (August 3, 2009), http://www.time.com/time/business/article/0,8599,1914350,00.html (“In a shockingly unsurprising move, Google CEO Eric Schmidt resigned from Apple Inc.’s board of directors today. This was inevitable, since both companies are staking their future growth on the explosion in mobile computing.”).

Again, in jurisdictions like Chile that do not follow the US model, it might be possible to reach interlocks arising outside of the merger context under the substantive competition laws.\textsuperscript{145} Without section 8 as an available option, however, it does not seem likely that resolution of the competitive concerns arising from the Google-Apple interlock would have been possible, at least not at such an early stage or in an equally efficient manner. This is seen in the Chilean examples described above, where competitively-suspect interlocks have been allowed to remain. In contrast, the FTC was able to intervene in the Google-Apple matter at an early stage, before the interlock presumably could have resulted in any actual violation of the substantive laws or caused any anticompetitive harm. That is precisely what section 8 is intended to prevent. Moreover, the FTC was able to address the interlock without the need to satisfy the more rigorous requirements of a substantive violation—a far more costly proposition for the agency.\textsuperscript{146} Under an alternative model

\textsuperscript{145} Gabrielsen et al., supra note 9, at 855–58 (discussing the availability of Article 101 TFEU as a potential mechanism for intervening ex post to deal with information exchanges arising from management interlocks and other minority ownership links).

\textsuperscript{146} Another similar FTC investigation may have been responsible for the announcement in March 2010 that famed venture capitalist John Doerr would be resigning from Amazon’s board of directors later that year. At the time of the announcement, Mr. Doerr had been a director of both Amazon and Google. According to the \textit{New York Times}, “Mr. Doerr’s decision was prompted by a Federal Trade Commission inquiry” into ties between the two companies. See Miguel Helft, \textit{F.T.C. Is Said to Have Looked Into Amazon-Google Ties}, N.Y. TIMES, April 1, 2010, http://bits.blogs.nytimes.com/2010/04/01/f-t-c-is-said-to-have-looked-into-amazon-google-ties.

\textit{Id.} To the extent that Mr. Doerr’s departure was the result of an FTC investigation, it—like the resolution of the Apple and Google interlock—was accomplished without the need for litigation. Similarly, any investigation was not initiated in connection with a reviewable merger or similar transaction, but in response to concerns that arose as Google and Amazon’s business came into competition with one another. Given the further intensification of competition between Google and Amazon since 2010—in electronic books and other digital content, including music and movies—this presumptive example further illustrates the importance of section 8’s prophylactic nature and the flexibility it provides for regulators to respond to developing concerns in emerging markets.
that relies on higher-stakes litigation, the benefits of section 8’s “administrative” enforcement might not materialize.

V. THE LOW COST, ADMINISTRABLE APPROACH OF SECTION 8 PROVIDES A SUITABLE TEMPLATE FOR SMALL AND EMERGING ECONOMIES

As described above, section 8 is a “limited” provision, and one that is largely prophylactic in nature. The statute identifies an area of potential competitive concern—management interlocks—and establishes a ban on the practice, but only as to those interlocks involving competing corporations, which carry the greatest anticompetitive risks. Rather than inquire about the competitive effects of an interlock by considering whether a combination of the companies involved would violate section 7 (as some defendants had argued), the courts in Sears and Protectoseal opted for a far more administrable per se approach. But, the statute itself then only applies to interlocks between competitors that exceed a certain threshold in terms of “capital, surplus, and undivided profits,” thereby eliminating from coverage interlocks that are unlikely to have market-wide anticompetitive effects. Moreover, the additional exemptions enacted in 1990, which exclude from section 8 interlocks that are likely to have de minimis competitive effects, further refine the statute’s scope.

The sanctions for a violation of section 8 are also, as a practical matter, “limited.” As mentioned earlier, the typical remedy involves the resignation of a director from one of the two corporations, or sometimes the divestiture of a business line so the firms are no longer competitors, and thus no longer subject to section 8’s prohibitions. And while private plaintiffs theoretically could recover damages, there do not appear to be any instances in which that has occurred. Thus, given the relatively low stakes involved, combined with the general clarity of the per se rule, enforcement of section 8 has tended to follow the “amicable” path described by Judge Easterbrook—“either

147. See supra notes 82–90 and accompanying text.
149. See Gerber, supra note 3, at 131.
150. See ABA, ANTITRUST LAW DEVELOPMENTS, supra note 77, at 430.
avoiding litigation or entering consent decrees contemporaneous with a suit’s initiation.” Indeed, more than thirty years have elapsed since the last contested Section 8 case brought by the government, notwithstanding continued enforcement efforts described in the prior section.

The US model appears to be capable of satisfying the criteria described above in Part II, and thus would be a reasonable approach for a small, emerging economy like Chile’s. An absolute ban on those interlocks involving horizontal competitors—whether imposed by an amendment to the Competition Act or adopted through case law by the TDLC—takes seriously the notion that these carry with them serious risks to competition, particularly in a small economy. It perhaps sweeps more broadly than a more flexible, case-by-case analysis would, and is likely to prohibit some instances of interlocks that might be socially beneficial or otherwise benign. The experience with section 8, however, shows that the number of false positives can be limited by including bright line de minimis exceptions that are properly tailored to their environment. Finally, the US model allows for enforcement to be carried out at relatively low costs.

The potential advantages of the US approach are most apparent in the Matte Group matter discussed above. Recall, despite the structural and personal links between CMPC Celulose and Arauco y Constitución—two competitors in the relevant market—the FNE did not pursue its investigation into a competition law violation because it was unable to establish the existence of a market allocation agreement between the competitors. Regardless of any such agreement in that particular case, however, the existence of such links between competitors

---

152. Chilean competition policy generally emphasizes market power, and Article 3(a) of DL No. 211 speaks in terms of horizontal agreements or concerted practices that confer market power on the parties. Although de minimis or per se rules have not yet been explicitly recognized in Chile, the Chilean Supreme Court seems to have made a move towards allowing something approximating a per se approach in a recent joint price fixing decision involving tourism operators. See Corte Suprema de Justicia [C.S.J.][Supreme Court], 20 septiembre 2012, “Fiscalía Nacional Económica v Explora Chile S.A.,” Rol de la causa: 113-2012. The Court held in that case that even when a collusive agreement is not capable of influencing prices or quantities, it could still violate the Competition Act. Future cases should elaborate on this point. Id.
generally carries with it significant risks. A direct prohibition against such interlocks would have made it far easier for the FNE to eliminate that risk in this instance—to the extent the mere existence of the prohibition did not result in the dissolution of the links in the first place—at lower costs, either through negotiation with the parties or a simpler proceeding before the TDLC that would largely be limited to establishing the existence of an interlock and the fact that the interlock involved competitors.

Certainly, implementing a bright line in an imprecise manner—either too broadly or narrowly—can create problems from corporate governance and competition perspectives.\(^{153}\) For instance, an overly-broad application could interfere “unduly with selection of executive talent and deprive[] non-competing corporations of the numerous innocuous (not anticompetitive) benefits that interlocks confer.”\(^{154}\) Conversely, an under-inclusive application of the statue might not reach all management interlocks between corporations that actually are meaningful competitors, “such that the statute’s intent to prevent collusion is not fully realized.”\(^{155}\) In devising administrable rules, however, it is inevitable that business practices that “sometimes produce benefits” will sometimes be prohibited.\(^{156}\) As noted above, however, the proper focus is whether on balance the rule is cost-effective. The search for greater precision generally leads to higher enforcement costs.\(^{157}\)

\(^{153}\) See Gerber, supra note 3, at 125–27 (section 8’s proscription of interlocking directorates “may in some instances be too broad, restricting corporations that do not meaningfully compete, and in other instances be too narrow, permitting interlocks between corporations that do meaningfully compete”). Gerber points to F.T.C. v. Staples, Inc., 970 F. Supp. 1066 (D.D.C. 1997), and United States v. Oracle Corp., 331 F. Supp. 2d 1098 (N.D. Cal. 2004)—cases decided under section 7 of the Clayton Act—as examples that illustrate how a non-quantitative approach to identifying “competitors” under section 8 can be, respectively, too broad or too narrow. In Staples, for instance, the court found, based on quantitative econometric evidence, that office supplies sold by office supply superstores constituted a separate product market from identical products sold in other types of stores. A “qualitative” analysis, by contrast, might have identified a broader market.

\(^{154}\) Gerber, supra note 3, at 109.

\(^{155}\) Id.

\(^{157}\) In the United States, for instance, the practical difference between litigating a bright-line per se case compared to a matter decided under the “rule of reason” is...
which may or may not be offset by the social benefits of allowing competitively beneficial conduct that otherwise would have been proscribed under the less precise, but more administrable rule.\footnote{158}

When the US Congress considered—and rejected—a proposal that would have prohibited interlocks only when a merger between the interlocked firms otherwise would violate section 7 of the Clayton Act, similar to the Japanese model, it recognized that such a rule would increase enforcement costs substantially, rendering enforcement uneconomical: “We would be most reluctant to expend such resources to determine whether an interlock should be challenged. An interlock does not pose the same degree of anticompetitive potential as a merger . . . . We favor bright line tests for prophylactic rules.”\footnote{159}

There are undoubtedly some questions that arise around the edges under the US approach, such as whether or not certain configurations of interlocks are implicated by the per se ban—an issue that might be even more problematic in Chile with its economic groups that have interests in wide swaths of the economy. Nevertheless, as argued above, the analysis is substantially less complex than under an “effects” standard and remains consistent with the desired bright line approach.

It might be possible to further refine any prohibition, to reduce the number of false negatives, while remaining faithful to the per se approach courts have followed. Professor Waller, however, convincingly notes that, in the context of interlocks, a “clear ‘no’” might be better than a “maybe,” especially when viewed ex ante.\footnote{160} He also remarks that “further precision would probably come at such a high cost that the incremental gains would not be worthwhile for either competition policy or corporate significant. As former FTC Chairman Robert Pitofsky has commented, “rule of reason cases often take years to litigate[,] are extremely expensive,” and are “very difficult for a plaintiff (either the government or a private party) to win.” Robert Pitofsky, \textit{In Defense of Discounters: The No-Frills Case for a Per Se Rule Against Vertical Price Fixing}, 71 GEO. L.J. 1487, 1489 (1983).

\footnote{158. For an illuminating discussion of how the assignment of burdens of proof and the standards for satisfying those burdens can play an important role in enforcement of the competition laws (in the context of exclusionary discounts), see Robert H. Lande, \textit{Should Predatory Pricing Rules Immunize Exclusionary Discounts?}, 2006 UTAH L. REV. 863 (2006).}

\footnote{159. H.R. REP. No. 101-483, at 6 (1990).}

\footnote{160. Waller, \textit{supra} note 3, at 884.}
Those costs include not only increased expenses for the government in enforcing the prohibition in specific cases, but also social costs generally if the prophylactic nature of the statute is undermined and an increase in anticompetitive management interlocks results in increased instances of unilateral or coordinated conduct that harms consumers. Moreover, to the extent that specific interlocks that do not fall under the bright-line ban nevertheless raise serious enough competitive concerns so as to infringe the general prohibitions of the competition laws, there appears to be no reason those could not be independently prosecuted in specific cases. Based on the discussion above, Professor Waller’s conclusion appears to be a reasonable one. Given the limited nature of a per se ban, with appropriately designed de minimis exceptions, further refinements to such an easily administrable approach probably are not justifiable on a cost-benefit basis.

Moreover, it should be recognized that the costs associated with not adopting some kind of reasonable measure to deal with interlocks involving competitors—but instead waiting for a violation of the substantive competition laws—can be high. Former FTC Commissioner Thomas J. Rosch, in a 2009 speech about section 8 enforcement delivered to an audience in Hong Kong, commented on the risk of competitor interlocks, and then went on to caution that “[t]hese concerns have, if anything, only grown in recent years as the government’s burden of investigating and litigating price fixing cases has multiplied.” Those burdens are the result, at least in part, of massive quantities of electronic communications and other documents that oftentimes must be reviewed and analyzed in connection with a complex antitrust case. They also include the social costs of undetected anticompetitive conduct that is not avoided by means of a reasonable ex ante prohibition. Thus, while the trend in US antitrust law has moved away from per se rules, Commissioner Rosch suggested that Hong Kong—where firms were linked together even more tightly than their US counterparts and the number of overlapping directors tended to be higher—“may wish to consider emulating the United States.”

In jurisdictions like Chile, which do not explicitly address management interlocks in their respective laws, it may still be possible to challenge particular interlocks under the general competition laws, or to analyze their effects during the course of a merger review.\textsuperscript{164} As discussed above, however, interlocks that raise competitive concerns can arise independently of a merger or other reviewable transaction, and the general competition laws might not arise until actual anticompetitive harm has occurred. Moreover, without a bright line prohibition, the costs of dealing with problematic interlocks is likely to be higher than in the United States, where the certainty of the rule generally leads to “amicable” resolutions of those concerns. In short, the section 8 approach is far preferable to the current framework for addressing competitor interlocks in Chile—and indeed, appears to be an optimum solution overall.

CONCLUSION

Section 8 was intended “to nip in the bud incipient violations of the antitrust laws by removing the opportunity or temptation to such violations through interlocking directorates.”\textsuperscript{165} The per se test applied by the courts allows for the statute to serve its prophylactic purpose, at the same time the de minimis exemptions exclude interlocks unlikely to have an adverse effect on competition. Although section 8 may be over- or under-inclusive in certain circumstances, and does not always clearly delineate whether firms are competitors, the US experience with management interlocks shows that “real utility” can be gained when the legislature, the courts and commentators “thoughtfully address” two legal spheres—corporate law and competition law—“in a unified manner.”\textsuperscript{166}

A recent study conducted for the FNE on the Chilean health care market provides examples of management interlocks, both direct (with common directors between different private health insurers and private hospitals) and indirect (for example, directors of the insurers participate in two or more private hospitals, and vice versa), in an important

segment of the economy. While simply transplanting existing competition law approaches across jurisdictions to deal with these issues is not always a recommended exercise, in the case of management interlocks, the relevant considerations discussed above argue point in favor of adopting a US-style approach. That model, if implemented in Chile, would certainly require some adjustments to deal with certain peculiarities in the market—such as when an interlock should be considered to involve “competitors” in the context of the country’s sprawling economic groups. And it should not be expected that such a measure would resolve the myriad enforcement issues associated with other types of structural ties between actual and potential competitors. Nevertheless, a limited ban on competitor interlocks—whether by legislation or adopted through case law by the TDLC—would be a good start, and a relatively low cost one at that.
